## Study to Improve Arm Function After Stroke

Many people who have had a stroke continue to have weakness in an arm. Extra therapy is known to help the arm improve after stroke, but the best approach remains uncertain. This study will examine this issue by comparing therapy provided in a clinic with therapy provided in your home via a computer.

If you had a stroke **4-20 weeks** ago and still have weakness in your arm, you might be eligible for this study.

If interested, contact Allison Kunze, Study Coordinator

Phone: (206) 744-5828

Email: [kunzea@uw.edu](mailto:kunzea@uw.edu)

*and ask about the "Stroke Study"*

For more info on this study, visit: [www.clinicaltrials.gov](http://www.clinicaltrials.gov)

Participation involves between 4 and 22 visits to Harborview Medical Center, as well as some therapy in your home. You will receive a parking voucher at the end of each clinic visit.

There is **no charge to you or your insurance company**, and you will be provided \$50 payment for transportation expenses upon completion of the study.
